AppointmentReminders.com Speeds App Development While Creating Superior Customer Experiences with Progress Telerik

AT A GLANCE

AppointmentReminders.com, a leading provider of automated scheduling solutions, has experienced fast growth. But with a user interface nearing a decade old, the company needed to modernize its solution—fast. It turned to Telerik UI for ASP.NET Core to create the most modern, integrated, graphically-rich and easy-to-use appointment scheduling interface.

COMPANY AppointmentReminder	**INDUSTRY** Business Services
PRODUCT Progress Telerik	**COUNTRY** United States

> "From a development standpoint, I can't even say where we would be without the components, but it would have taken us at least twice as long to complete the project and likely with a fraction of the functionality."

Jonah Langer
Founder and Lead Programmer,
AppointmentReminders.com

Challenge

With a user interface nearing a decade old and with limited functionality, AppointmentReminders.com needed to modernize its solution—fast. The new interface had to provide a customized, highly visual, engaging experience to motivate patients and customers to show up for scheduled appointments.

Solution

Native integration with Visual Studio and other technologies to speed development of a highly-visual, feature-rich UI.

Telerik ASP.NET Core with its 110+ Components to create modern web apps for any scenario.

Depth of support, documentation and resources to guide developers through specific scenarios.

Results

Grid Control provides critical data manipulation capabilities while enabling innovative features like real-time user interaction.

Entire modernization project completed in less than six months, exceeding expectations.

Advanced features, rich graphical interface has moved the customer experience, "light years ahead".
